Mago series
EVO

Evo is Elca's standard handheld radiocontrol for machines and industrial lifting and handling. It consists of 6 double step push-buttons, 1 programmable function button, Start with programmable code activation key and Stop. Auto switch off, IP65, internal Lithium battery (up to 20 hours) with power supply ELCA-CLIP. Optional "Master-Slave" and "multi-transmitter".

Mito series
MINI

MINI is a compact radiocontrol to control remotely a wide range of industrial automation applications. Versions from 4 to 10 single step buttons Control panel and function modes are programmable, IP67, floatable. Bi-directional technology LBT with automatic frequency change, while working a LED "check" to confirm active radio connection with receiver. Internal Lithium battery (up to 50 hours). Configurations with multiple transmitters/receivers.

Mito series
PIC

PIC is a compact waistbelt radiocontrol, small and lightweight, robust and reliable. Designed to satisfy a vast range of applications (compatible with MITO and E1 electronics). The standard configuration consists of 3 selectors and emergency mushroom-shaped stop button, allowing for 5 commands, and with a second function toggle, up to 8 commands. Interchangeable Lithium battery. The blinking of the "CHECK" Led indicates to the operator that the receiver is connected and ready to receive the commands sent.

E1 series
MIA

MIA is the new industrial handheld radiocontrol with 10 double-speed push-buttons and 2 programmable single-speed, Start and Stop. Options: 1-0-1 toggle switch; side push-buttons, potentiometer, 4 LED feedback or active selection, data feedback graphical display; dead-man, off-on-off, function. Pairing key easily accessible externally. Interchangeable Lithium battery with power supply ELCA-CLIP.

Mito series - E1 series
VETTA

The compact, waist portable, VETTA radiocontrol is very robust and reliable with reduced dimensions and weight. It allows to control up to 9 functions, plus Start and Stop. Available with proportional adjusting speed and 4 feedback LED (series E1). Replaceable internal Lithium battery with ELCA-CLIP power supply. Customized control panels and functional modes, available as option.

Tel series
VAI
PUNTO
SFERA
M

Cable control can control machinery at a distance via cable. They are used in several situations: in place of a radio control in situations where radio use is limited (airports, military areas, etc.), as a backup system to avoid machine down time (with a kit radio/cable with exact same layout (see concrete pumps), where a fixed control panel on the machine is not possible or where a control via cable is preferred. Controls modes, on/off or proportional technology, cable length, available on request.

Genio series - E1 series

PUNTO

PUNTO is a compact joystick radiocontrol. Standard configurations with 2 on/off joysticks, single or double axis (series Genio) or 2 proportional joystick or 4 mono axis (series E1), 3 toggle switches, removable activation key and Stop push-button. Transmitter is customizable according to specifications supplied by the customer. Powered by interchangeable battery with dedicated charger.

Genio series - E1 series

SFERA

Joystick radiocontrol SFERA has the same characteristics of PUNTO model even if slightly bigger to host 3 on/off joysticks, single or double axis (series Genio) or 3 proportional joysticks or 6 single axis (series E1), 5 toggle switch, removable activation key and Stop push-button. Transmitter can be adapted to customer needs. Powered by interchangeable battery with dedicated charger.

Genio series - E1 series - Bravo series

M

Model M transmitter is the winning choice for its flexibility and available surface. Can be fitted with single or double axis joystick and permits a wide range of layout: potentiometers, toggle switches, many kind of buttons, with up to 6 proportional outputs (8 Bravo series) and 28 on/off commands. Interchangeable battery, to work up to 20 hours. Automatic frequency change; analogic commands remote setup. Available a solo on/off version, too (Genio).

Receivers

The receiver is an integral part of the radiocontrol system. Connected to the electrical box of the machine to be controlled. It is activated by a command of its own transmitting unit, to be ready to receive commands. Models and electronics are different, accordantly with type and number of functions, outputs (on/off, proportional), power supply (Vac, Vdc).
